ABSTRACT

The Division of Community Services (CS) is providing educational services to a growing percentage of the total student headcount enrolled at the Community College of Philadelphia (CCP). Data from fall 1986 indicated that: (1) 51.1% of the students enrolled at CCP took their courses through the CS Division; (2) while credit-free enrollments grew, credit enrollments remained fairly constant; (3) in comparison to on-campus students, the CS students tended to be older, were more likely to be white, were less likely to indicate that they planned to earn a degree, and were more likely to be planning to enroll at CCP for only one semester; (4) 48% of the students enrolled in CS credit courses in fall 1986 indicated that that would be the only semester they would attend the college; (5) there was no significant movement of students from off-campus locations to the main campus, nor from the main campus to off-campus locations; (6) most classes in the CS Division were taught by part-time faculty members; (7) English and Business Division courses accounted for a large percentage of the courses offered in the division; and (8) grade distributions indicated that students in the CS Division received higher grades and were less likely to withdraw than their counterparts on campus. The bulk of the report consists of tables comparing CS and on-campus data. (UCM)

A STATISTICAL SNAPSHOT OF THE DIVISION OF COMMUNITY SERVICES

The following statistical tables are intended to provide a summary statistical snapshot of the Division of Community Services. During the last two years, a concerted effort has been made to expand the extent of the College's data base on Community Services activities. This report highlights some of the key information that is now available about the Division of Community Services. Some of this information has been available in the Annual Statistical Compendium, while other data are provided here for the first time.

The Division of Community Services is providing educational services to a growing percentage of the total student headcount enrolled at the Community College of Philadelphia. In the Fall, 1986 term, 51.1 percent of the students enrolled at CCP took their courses via the Division of Community Services. This growth in Community Services has been largely in the credit-free area. Credit enrollments have remained relatively constant but shifted significantly in location. There has been growth in West Philadelphia and Northeast Philadelphia, areas served by the new regional centers, while enrollments in other credit programs throughout the City have declined. In the Fall, 1986 term, 58 percent of the off-campus credit students were enrolled in the northeast section of the City.

The Division of Community Services continues to serve a student population that is distinct from that on-campus in a number of ways. Community Services students are older and more likely to be white. Credit students are more likely to be female than on-campus students, while a greater proportion of non-credit students are male.

There is not a significant movement of students from off-campus locations to on, or from on-campus locations to off. The advent of the regional centers has not affected the migration of students to and from the main campus from off-campus locations. Only five percent of credit Community Services students eventually enroll at the main campus. Slightly more students who start on-campus subsequently enroll off-campus than begin off-campus and eventually enroll on-campus. Off-campus students starting in the Northeast are the least likely to subsequently enroll on-campus.

Community Services centers are located throughout the City. Every section of the City has at least one Community Services instructional site, with the exception of lower North Philadelphia which is serviced by the main campus. In the last fiscal year, approximately half of the enrollments in Community Services non-credit offerings were in programs that were initiated as a result of educational needs identified by other agencies, organizations or businesses.

Off-campus students are far less likely to indicate that they plan to earn a degree and much more likely to indicate plans to enroll for only one semester at the Community College of Philadelphia. In the Fall, 1986 term, 48 percent of the students enrolled in credit courses in the Division of Community Services indicated that this would be the only semester that they would attend the College. Community Services students are much more likely to be studying for work-related reasons and far less likely to be interested in education for the purposes of transfer to a four-year school.

Consistent with their educational goals, Community Services students on the average have completed fewer credit hours than on-campus students. The median number of credit hours previously earned for Community Services students was 6 in the Fall, 1986 term, while it was 15 for on-campus students in the same term.

Most classes in the Division of Community Services are taught by part-time faculty members. Full-time faculty teach most frequently in courses offered by the Allied Health and Math and Physical Science Divisions and least frequently in courses offered by the Business Division. English and Business Division courses count for a large percentage of the courses offered in the Division of Community Services. Other than the English Department, the Humanities Division teaches very few student credit hours in the Community Services Division.

Course grade distribution indicate that students in the Division of Community Services receive higher grades that their counterparts on campus. Community Services students are also less likely to withdrawal. As a result of this academic performance, off-campus students have higher grade point averages. The median grade point average to all on-campus students in the Fall, 1986 term was 2.58, while off-campus it was 3.0.
